### Cal ISO Flex Alert, Southern California

The California Independent System Operator (ISO) has declared a Flex Alert for Southern California, from 1000 hours. to 2100 Monday, 06/20/16, due to high temperatures. During times of high temperatures, demand on the power grid can be strained, as air conditioner use increases.

- Please see attached document for full announcement

### Phase II Activation of the Heat Contingency Plan

Phase II of the Heat Contingency Plan is activated from Sunday, 06/19/16 – Tuesday, 06/21/16. Due to forecasts of dangerous and excessive heat.

- Per the National Weather Service (NWS):
  - Dangerous Heat expected Sunday through Tuesday over much of Southern CA (coastal areas and exception).
  - Sundowner winds expected Saturday afternoon/evening will keep lows into Sunday morning with little relief.
  - A weak offshore flow over far southern CA could break numerous high temperature records Sunday and even more on Monday.
  - Warmest temperatures will be Monday with highs 15-20 degrees above normal for this time of year.
  - Temperatures Monday could be the hottest recorded in a decade.
  - Heat of this magnitude will have impacts for even the general population if precautions are not taken.
  - See attached NWS Heat Briefing on the heat event.
- State's Top Emergency Manager, Public Health Officer Urge Californians to Prepare for Excessive Heat Beginning this Weekend
  - In response to forecasts of excessive heat early next week, especially in Southern California, state officials are urging Californians to prepare for potentially record-breaking temperatures starting Sunday. State agencies, utility companies and others have already implemented plans, and taken steps, in anticipation of the heatwave. (See link for entire Press Release)

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

Northern California remains situated between low pressure near the Pacific Northwest and strong high pressure over the Desert Southwest. This pattern puts the Northern California under a dry southwest flow aloft. Hot and dry weather will prevail through Tuesday, with temperatures 8-12 degrees above normal and afternoon min RH down to 8-18% in the warmest inland areas. Occasional light night and morning north to northeast surface downslope winds will enhance the hot and dry conditions in and around the Sacramento Valley during this time. Humidity will only recover to only 25-35% in these areas each night. Winds will be up-slope/up-valley during afternoons. Computer models are still somewhat inconsistent with the subtle details that will have a significant effect on the region, but at this time it appears that the low pressure near the Pacific Northwest will deepen Wednesday - Thursday. This will cool temperatures across Northern California by about 5 degrees. There is a remote (less than 10%) chance of isolated thunderstorms near the state line Thursday. Winds east of the Cascade-Sierra crest will be S to SW 15-25 mph with gusts to 30-35 mph and humidity around 12-20% Wednesday - Thursday. This event will likely remain below High Risk criteria. High pressure will strengthen over Northern California Friday and Saturday, bringing a return to the conditions we'll see today and Tuesday. Additionally, a stronger north to northeast offshore downslope surface wind pattern will develop from the western Sierra slopes to the coast by late Friday and reach its peak early Saturday with gusts of 25-30 mph. This pattern will be monitored for High Risk criteria.

## **SOUTHERN CALIFORNIA**

Strong high pressure over the Four Corners Area will bring record heat to Southern California and very warm temperatures to Central California today. Maximum temperatures will be in the mid 80s to upper 90s across the mountains and between 100 and 115 in the valleys. There will be widespread minimum humidity in the single digits and teens away from the immediate coast today. Gusty north winds of 15 to 25 mph with gusts to 40 mph will surface across the South Coast of Santa Barbara once again late this afternoon through early Tuesday morning. The high pressure will weaken some causing significant cooling across Southern California Tuesday. Temperatures will cool to the 80s to low 90s across the mountains and mid 90s to 105 in the valleys. There will be little change in temperature Wednesday through this weekend, with most locations away from the coastal areas still around 10 degrees above normal. Minimum humidity will increase some over the coastal areas and coastal valleys starting Tuesday, but interior locations will continue to see widespread minimum humidity in the single digits and teens through this weekend. Westerly afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes through Friday. Nightly north winds of 20 to 30 mph with gusts to 50 mph will occur across the South Coast of Santa Barbara Thursday through this weekend.
